

Product: INP-GM495503

Installation

- The devices must be installed by a construction team in accordance with the installation instructions and good building practices,
- the equipment is intended for playground use, installed on grass, gravel, sand, wood chip, bark or rubber surface, attached permanently to the ground in concrete foundation, in accordance with the technical documentation,
- the equipment is installed on the surface designed for a playground with relatively even plane, as areas with highly differentiated levels affect the height of free falling and may require the use of other surface or completely disallow installation of the unit

Failures

- secure the unit against use until the failure is repaired by fencing it with a warning tape and displayed information board, e.g.: "CAUTION, EQUIPMENT IS DAMAGED",
- dismount damaged part that may compromise the children safety, e.g. protruding sharp metal parts of connectors, etc.,
- during repair, replace damaged parts for identical that were used by the product manufacturer,
- if required, contact the product manufacturer by the phone no.: 91 422 33 99

Inspection and maintenance

Frequency of inspections shall be defined based on such factors like: intensity of use, level of vandalism, climate characteristics, e.g. seaside locations, environmental pollution or age of the equipment. Standard EN 1176-1:2008 recommends the following frequency and scope of inspections:

- **Regular visual control (every 1 to 7 days)**
It allows to find obvious hazards due to vandalism, wear or weather conditions.
- **Functional control (every 1 to 3 months)**
More detailed inspection in order to check the equipment functioning and stability. Pay attention to cleanness, clearance between the units and ground, finishing of smoothed surfaces, protruding foundations, sharp edges, missing parts, excessive wear.
- **Basic yearly control (at least once a year)**
General assessment of safety level, condition of foundations and surfaces. Yearly basic control may require uncovering or dismantling of some parts, so it should be made by the producer or his authorized specialist.
